

To Sergey,

1. Regarding task 2, def (remove_positives), I really tried to get this right but whatever I print, I still get positive values..
2. Regarding task 2, def (filter_leaps), I don't understand how to get every 1/4 of the range of years 1-2022? Could you look at my attempt and give feedback?
3. I started task 3, however, because I am SO behind with course, I decided to leave it as I think I do have a basic grasp of inheritance and if I stumble upon issues in future task because the lack of knowledge in Inheritance then I'll return back to lesson 11.
 1. If you think that I need to do task 3 and 4, for example, because you see me having lack of knowledge, then do let me know and I will do them.

Many thanks.
